

“Creating Information Management Capability During Emergency Response Event”

Client: Large Global E&P Company

Client Challenge	<ul style="list-style-type: none"> • Multiple streams of voluminous unstructured data being received without the capability to categorize and adequately store in an organized manner. • Need to identify and glean valuable information from large content repositories. • Need to search and find valuable information quickly and easily. • Need to quickly respond to a flood of internal and external request for information. • Manage extremely sensitive information across multiple stakeholder groups.
Boxley Group Action	<ul style="list-style-type: none"> • Developed and structured a better data flow capture process, creating a more effective process with a strong governance structure. • Worked with the project sponsor to identify and engage key stakeholders to remove barriers and support the projects success. • Delivered an eloquent, staged solution to quickly gain quick wins, resolve immediate problems, and gain uptake. Successfully moved through multiple phases to deliver a solid information management platform, that was quickly adopted.
Results	<ul style="list-style-type: none"> • Quick, short-term workable solution to help resolve near term limitations, while developing a longer term solution in parallel. • Delivered the first SharePoint 2010 based solution for information management within the organization globally, despite internal IT resistance and numerous bureaucratic obstacles. • Became a trusted advisor to for the project sponsors.
Boxley Group Competencies	<ul style="list-style-type: none"> • Organizational Change Management • Process Optimization and Lean Six Sigma • Information Management • Information Technology • Project and Program Management
